SUBJECT: New “Weld Center” Expansion

Republic is pleased to announce that we have moved into our new expanded 20,000 sq. ft. “Weld Center” facility. The demand for value added programs continues to grow as distributors take advantage of Republic’s factory welding and direct jobsite delivery. This state of the art facility houses 10 welding tables and floor space for up to 500 3-sided welded frames.

This new facility has full modification and welding capabilities and can house entire projects such as schools & hospitals eliminating partial and lost shipments.

Typical Weld Center Capabilities:

- *Standard and full profile welding*
- *Special elevations*
- *Segmented curve frames*
- *Centered glass stops*
- *Fixed pocket glazing bead*
- *Special angle and 90° elevations*
- *Over sized frames for “field” splicing*
- *Shadow frame elevations*

Republic is continually looking for ways to better respond and support distributors through product developments and service improvements. As always we welcome every opportunity to discuss any ideas or suggestions you may have regarding future business opportunities.

Sincerely,

Jason W. Lisewski
Director, Product Engineering & Development
